

MULTI SITE COMPANIES

A MODERN MULTI-SITE PHONE SYSTEM SHOULD PAY FOR ITSELF!

Companies with multiple sites are in a better position than ever to capitalize on the power of linking their sites with a networked phone system and voice mail.

The Advantages are Immediate

- Voice Mail sharing – between sites
- Tele-workers work remotely or from home
- Broadcast Messages to All Company Employees
- Auto Attendant or Live Answer from one site
(consolidating incoming calls, reception, and scheduling to one site)
- Free Long Distance Calling between Sites or Teleworkers.
- Dial Tone Sharing on T1 line, analog lines, or PRI via SIP Phones.

This is all possible due to the emerging power of VoIP
(Voice Over Internet Protocol)

There is a wide variety of VoIP enabled systems available and the differences are hard to see. Without some BASELINE by which to compare systems, the average business owner is lost in the technology. We Can Help!

Telephone systems have changed dramatically in recent years. Even industry professionals have a hard time keeping current with all the new technology. Acticor can give you a BASELINE by which you can do an “apples to apples” comparison of systems, which helps you make a more objective decision.

Establishing this “baseline” is usually the most difficult part of system selection process!

- One of our Analysts will look over your Setup and make Recommendations based on a Cost / Benefit Comparison Analysis.

We try to make technology understandable. Call us for more information.
